

PROJECT PROFILE

TITLE: “ECO FRIENDLY PROJECT”

AIM: Go Greener – Go Eco Friendly ---- SAVE EARTH

OBJECTIVES:

Reduce of waste products
Usage of renewable resources
Bio- degradable
Increase in efficiency of building
Recycled processes
Local availability
Reduction in air, water and land pollution
Increase life span and durability

CONCEPT:

Today in our daily life, we can see lot of geo-graphical changes on the earth, similarly drastic changes in climatic factors occurred due to man kind development

FACTORS EFFECTING THE CHANGES ON EARTH ARE :

- Rapid increase in temperature
- Global warming due to emission of dangerous gases by Improved human life
- Cutting of wood for human luxuries

- Wastage of rain water causing floods
- Usage of non-renewable resources
- Electronic appliances releasing dangerous gases

MEASURES :

By approaching my “ ECO-FRIENDLY CONCEPTUAL HOUSE”

we can control all factors effecting nature and can also maintain environment in a balanced way

ASPECT OF MIDDLE

CLASS INCOME:

- In the view of 5years service and budget plan, this high intial investment for “ECO FRIENDLY” concept will meet the budget spent for living cost and maintanece of an ordinary man uses, where he is exploiting the whole earth with dangerous emissions and keeping his further generation into polluted environment.

CONCLUSION:

- BENFITS WITH MY PROJECT:
- Saves electicity bill
- Can maintain constant temperature throught out the year
- With out using air conditioners whole house will be cooled
- With out using room heaters whole house will be warmed
- Provision of glazing technique to the windows of house will be highly secured, temperature fluctuations due to outside climate will

be controlled, entering uv rays to home will be halted, also features as noise reduction and non-corrosion

- No interruptions in the power , no use of special generators as alternatives for power drop, maintenance-free, highly economic with increase in duration
- Rain water preservation
- Interior decors with recycled materials having more durability than wood
- Painting works with reducing volatile organic compounds
- These gives more efficiency , more economic and totally “Eco friendly”.

MIRROR WALL CONCEPT:

- This mirror wall can increase efficiency of solar power and can solar power can be maximized whole 12 hours in a day & in a any direction is possible with this mirror wall
